NOCTUO PLA XMAS Spark Anniversary BOX

Noctuo BOX is a great idea for a ready-made, perfectly composed gift for every 3D printing enthusiast. Each BOX contains four 0.25kg spools and an additional Cleaner for free!

PLA XMAS Spark Anniversary Box is a special edition of the BOX contains the basic printing material – PLA – in the XMAS Spark version, with sparkling particles in unique, holiday colors. The BOX consists of four spools in Spark Blue, Spark Green, Spark Gold, and Spark Burgund.

PLA XMAS Spark Anniversary Box contents:

PLA 1.75mm 0,25 kg Spark Blue
PLA 1.75mm 0,25 kg Spark Green
PLA 1.75mm 0,25 kg Spark Gold
PLA 1.75mm 0,25 kg Spark Burgund

ATTENTION - you can achieve a different surface effect by changing the print settings. Using classic PLA profiles, XMAS Spark filament will have a slightly satin finish with visible particles. For a more glossy finish, increase the temperature, reduce the cooling rate, or significantly slow down the print.

PLA filament is one of the most popular and most frequently used materials in 3D printing. It is odorless, stiff, biodegradable and easy to work with. Its high popularity means that it is widely used in undemanding projects, especially by begginers. Recommended as a starting material - among other things, due to low shrinkage and no need to use special primers and heat the table, which greatly simplifies printing with this material.

Main use:

- home and office gadgets,
- toys,
- teaching aids,
- ornaments, decorations,
- prototypes.

Cleaner is a specially prepared filament for cleaning the 3D printer hotend. While printing with different materials, particles may accumulate in the hotend, affecting on permambility and work culture of the hotend. This filament is a perfect cleaning tool, it has the properties of binding and detaching the remains of other filaments in the hotend. It is recommended to use Cleaner each time the printing material is changed. Cleaner is suitable for hot extrusion cleaning or ‘cold-plug’ method.
